

Autocompletion and focus issues

Please note that the current focused field is the one with a yellow background

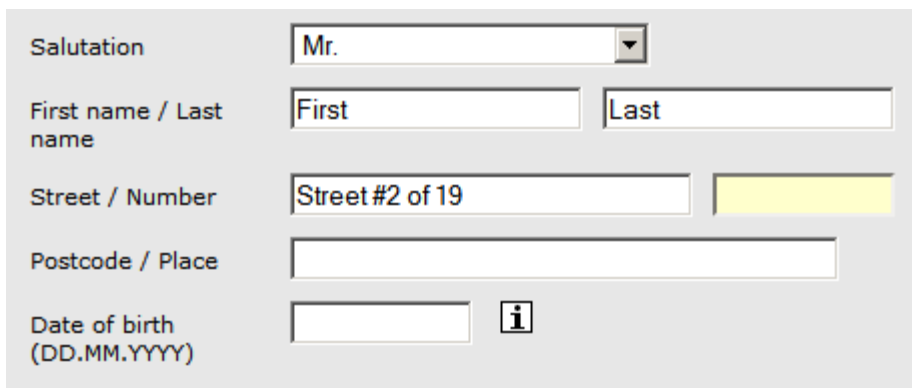

1.1.1 How to reproduce:

- Select "payment" link to begin the creation of a new authorization
- Fill in the required fields and go to the next step
- Write something in the "Street" field in order to trigger autocompletion

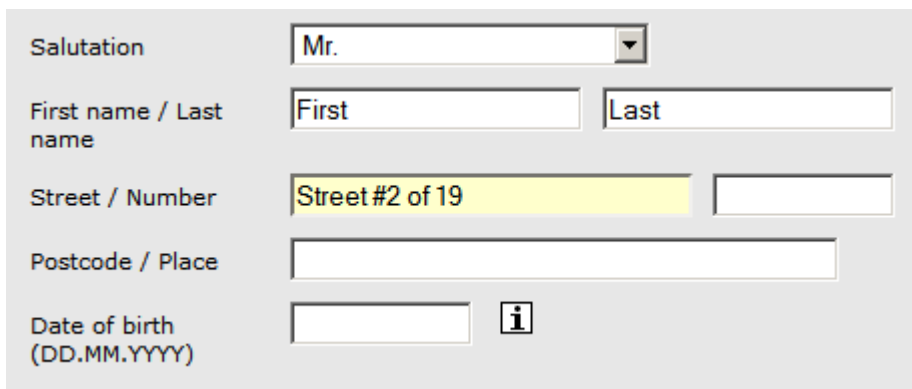

The screenshot shows a form with the following fields: Salutation (Mr.), First name / Last name (First, Last), Street / Number (Street), Postcode / Place, and Date of birth (DD.MM.YYYY). The Street field is active, and a dropdown menu is displayed with the following options: Street, Street #0 of 19, Street #1 of 19, Street #2 of 19, Street #3 of 19, Street #4 of 19, Street #5 of 19, and Street #6 of 19. The 'Street' option is highlighted in yellow, and 'Street #2 of 19' is highlighted in dark grey.

- Select one of the proposed streets using ENTER key and then jump (as quick as possible) to the next field using TAB key

The screenshot shows the form after the 'Street #2 of 19' option has been selected. The Street field now contains 'Street #2 of 19' and is highlighted in yellow. The dropdown menu is no longer visible. The other fields remain the same.

- As soon as the client receives a response for the "autocompleted item selected" event, the caret will be placed again in the "street" field, at the end of the text.

The screenshot shows the form with the Street field containing 'Street #2 of 19' and highlighted in yellow. The caret is positioned at the end of the text in the Street field. The other fields remain the same.

1.1.2 Expected behavior

The focus should be in the latest focused field

1.1.3 Actual behavior

The focus is in the wrong field
