Results

In all tests max windows/beans number was set to 2. Results shows, that if max number of view beans would be exceeded, view map size and related beans could be corrupted at different stages. In all cases when @WindowDisposed used, not needed beans are created.

Just for example on the productive screen we have obtained unnecessary footprint for 10 view beans when opening at the same time 30 windows and closing all later on (max allowed number was set to 20). It consumed around 50MB of unnecessary memory per session.

Tests info

To perform tests following changes should be made in web.xml:

- numberofLogicalViews reduced to make it easier for reproduction i.e. to 2:

```
<context-param>
    <param-name>com.sun.faces.numberOfLogicalViews</param-name>
    <param-value>2</param-value>
</context-param>
```
- While View scope beans map size is not in line with this parameter there is also necessity to add in web.xml following listener (it's class attached):

```
<!-- SessionListener to shrink the size of the LRUMap for the JSF ViewScopedBeans. -->
<listener>
    <listener-class>test.view.scope.window.bean.SetActiveViewMapsSizeSessionListener</listener-class>
</listener>
```

Following attached classes should be added to project:

- SetActiveViewMapsSizeSessionListener.java – listener to have same number of view beans as logical views
- ViewBean.java – view scope bean used for tests
- WindowsGlobalCounter.java – counter to track beans and it's number
- viewScopeWindowTest.xhtml – page for ViewBeans

While testing please open “viewScopeWindowTest.xhtml” according to presented below scenarios.

JSF implementation (no @WindowDisposed)

For this test to check how session map looks without ICEFaces @WindowDisposed there is needed to remove @WindowDisposed annotation from ViewBean.java.

2 windows opened

As expected 2 beans were created:

- BEAN CREATED: 2c25269f
@PostConstruct of: 1 -> 2c25269f
- BEAN CREATED: 1f1b8d27
@PostConstruct of: 2 -> 1f1b8d27

3 windows opened

As expected 1st bean was destroyed while max number of active beans was exceeded. New one (3rd) created:

- @PreDestroy of: 1 -> 2c25269f
- BEAN CREATED: 5c9c9e16
@PostConstruct of: 3 -> 5c9c9e16

Currently in map we do have beans 2 and 3 - OK.

1st window closed

Closing 1st window (actually outdated) triggers 4th bean creation and places it in the session (even when not needed) – **NOK**. Currently windows for beans 2 and 3 opened but in map beans 3 and 4 presented.
